

WGS84

UTM Zone 50N

Mercator

Albers Equal Area Conic

Lambert Conformal Conic

Equidistant Conic

0 1,250 2,500 Miles

The different projections are all decent ways to project Beijing but the Mercator projection looks to have the least amount of distortion. However the Lambert Conformal Conic projection also looks to be appropriate despite having slight distortion. The Equidistant Conic and UTM Zone 50 projections are the next best but have slight distortions in shape and size respectively. While the WGS 84 and Albers Equal Area Conic distort both shape and size.
